

Elementary students learn and work together in clusters that promote communication and sharing.

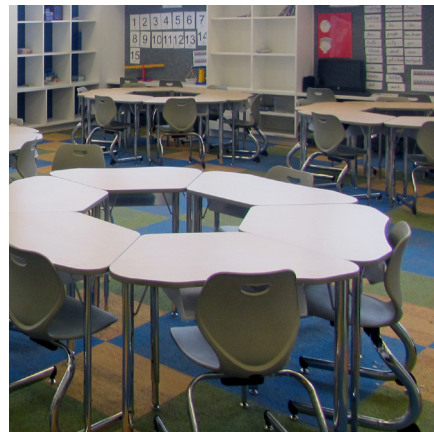

Challenge: Colegio Huinganal is an elementary school that focuses on personalized and comprehensive education.

Expansion into a new building provided the opportunity to design versatile classrooms that allow teachers to organize their students into distinct groups. The goal was to create dynamic classrooms where elementary students work together in clusters of six.

Solution: Height-adjustable Intellect Wave® trapezoid desks and cantilever chairs deliver worksurfaces at the perfect height with 15" - high seats that are ideal for this age group. Trapezoid-shaped desks smoothly configure into the preferred groups of six. Cantilever chairs don't restrict leg movement and promote sitting position changes. This enhances student attention and engagement, which ultimately drives more effective learning.

Teachers work from 18" Intellect Wave cantilever chairs and height-adjustable Intellect® Activity tables, which are compact and easy to move.

Fresh colors create learning spaces that inspire and enhance effective learning.

Design continuity is achieved by featuring Intellect Wave cantilever chairs in music classrooms and throughout the school.
